Healthvision Announces First Quarter Results

DALLAS – May 7, 2009 – Healthvision started the year off strong with 211 transactions. International initiatives resulted in ten new clients located in China, Uruguay, Guatemala, France, Netherlands, Germany and the UK. “Our first quarter results are reflective of the continued value we’re bringing both new and existing customers,” stated Russell Fleischer, Healthvision’s chief executive officer. “Our R&D team continues to make important improvements across our product portfolio as we evolve to meet the ever changing needs of the healthcare industry.”

Here are a few examples of Healthvision’s first quarter highlights:

Martin’s Point Health Care – a not-for-profit health care organization in Portland, Maine serving over 85,000 patients and members throughout northern New England and New York. Martin’s Point replaced their current interface engine with Cloverleaf®. They are also taking advantage of the Cloverleaf Data Integrator for accessing data within ODBC-compliant databases and Global Monitor for remote monitoring.

Sandlot – a wholly owned subsidiary of North Texas Specialty Physicians located in Fort Worth, Texas, went live with their Health Information Exchange (HIE) and integrated Electronic Medical Record (EMR) platform currently serving hospitals, doctors, and other healthcare providers in the Tarrant County area.

Also, continued investment in research and development included general availability of:

Cloverleaf Integration Services 5.7 – Healthvision’s flagship product, facilitating information exchange within or outside the four walls of an organization.

Cloverleaf Secure Courier 4.2 - a "lightweight" application that can be deployed across multiple clients, with the intent of sending and receiving data - via the Internet with no additional hardware - to a centralized Cloverleaf Secure Courier Server.

Intelligent Health Broker v2.2 – allows organizations to produce and consume web services that can be used to create a cost-effective, secure, and reliable end-to-end Internet health care infrastructure.

Exchange and Clinical Portal v9.02 – a fully-hosted solution that allows health systems to exchange data and deliver results to doctors via the Internet.

Healthvision also recently announced the expansion of their research and development arm into Shanghai, China. This office will be responsible for all development and support services for the Asia Pacific market.

About Healthvision

Healthvision is a leading provider of healthcare specific software and services. We provide innovative, cost-effective solutions enabling vital access to healthcare information anytime and anywhere, improving clinical and financial outcomes. Our solutions, powered by Cloverleaf Integration Suite, are at work in thousands of facilities around the globe, including 40 percent of all large Integrated Delivery Networks, and 33 percent of U.S. hospitals.
